

ETHAN GEORLETTE

Computer Science Student | DevOps & Platform Engineering | Java, C# & Linux
Israel | +972-54-6266-243 | Ethan.Georlette1@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Science B.Sc. student and Professional Support Engineer with a software development background and hands-on experience supporting Linux-based production and backup infrastructure. Independently building and managing a self-hosted private cloud using Docker Compose and containerized services, with practical experience in service networking, REST APIs, databases, TLS, authentication, and troubleshooting. Programming experience in Java, C#, Python, C, and JavaScript, with basic exposure to GitHub Actions and Kubernetes. Interested in DevOps, platform engineering, CI/CD, automation, and cloud-native infrastructure.

EDUCATION

The Open University of Israel - B.Sc. in Computer Science (in progress)

Relevant coursework: Data Structures and Algorithms, Operating Systems, C Programming, Computer Organization and Performance, Logic, Probability and Statistics.

Coding Academy - Full-Stack Development Program | Merit scholarship, Israel Innovation Authority

TECHNICAL SKILLS

Programming: Java, C#, Python, C, JavaScript, Node.js Development & APIs: Spring Boot, React, REST APIs
DevOps & Platforms: Docker, Docker Compose, Git, GitHub Actions (basic exposure), Kubernetes (basic familiarity) Systems & Networking: Linux (RHEL, Ubuntu, CachyOS), TCP/IP fundamentals, Linux networking
Data & Infrastructure: SQL, PostgreSQL, MinIO, Traefik Focus Areas: CI/CD, deployment automation, cloud-native infrastructure, platform engineering

PROFESSIONAL EXPERIENCE

Professional Support Engineer | Belocal 2022-Present

Support and troubleshoot production and infrastructure environments, including Linux-based systems and backup infrastructure, using logs and system diagnostics to isolate technical issues.

Coordinate with technology vendors and manufacturers on support cases, product updates, technical recommendations, and infrastructure changes. Document technical findings and troubleshooting results, translating them into clear and actionable recommendations for customers and technical stakeholders.

SELECTED SOFTWARE & SYSTEMS PROJECTS

Self-Hosted Private Cloud | Linux, Docker Compose, Spring Boot, PostgreSQL, MinIO, Traefik

Building and managing a Raspberry Pi 5 private cloud composed of containerized backend, storage, database, and reverse-proxy services.

Configured Docker Compose service orchestration, persistent storage, networking, TLS routing, JWT authentication, and restricted administrative access.

Two-Pass Assembler Course Project | C

Developing a modular assembler-style translator in C for a custom instruction set, including parsing, symbol and label management, operand validation, encoding, and line-level error reporting.

ADDITIONAL EXPERIENCE

Military Leadership & Field Testing - Served as a combat commander, led teams in field environments, and participated in operational trials with R&D stakeholders, providing practical feedback from field use.
